SUMMARY

In my short journey as a front-end developer, I've already showcased my ability to craft compelling user experiences. From responsive design to optimizing web performance, my skills are honed to enhance the end-user experience, and I'm eager to contribute my creativity and technical expertise to the next exciting project. I am a student or entry-level candidate, or if you're going to take the time to write a compelling, custom objective.

WORK EXPERIENCE

Front-end Developer

Freelance/Self Employed 01/2022 - Present

-Work in dynamic web application streamlines the rental process, offering users an intuitive and responsive platform to search, book, and manage their rental cars effortlessly. With a modern user interface and robust features such as vehicle selection, reservation and payment processing.

-Developed dashboard provides real-time insights and data management capabilities.

Seamlessly connect your application to Firebase.

This dashboard simplifies data visualization and management, making it an invaluable tool for businesses and projects of all scales.

EDUCATION

Bachelor's degree, faculty of science, Tanta University.

PROJECT EXPERIENCE

Job Tracking App:

Demo: [Jobster](#)

Code: [GitHub repo](#)

- React application built with, React-Router for client-side routing, Axios to fetch data from API, Redux Toolkit making (store, actions, reducers) to manage state over components, (add, update, delete) list of jobs and styled-components for styling.

Comfy Store App:

Demo: [Comfy Store](#)

Code: [GitHub repo](#)

- React e-commerce application Built with, React-router for client-side routing, Axios to fetch data from API, use context-API to manage state in app, add authentication using autho, stripe for payments.

GitHub User App:

Demo: [GitHub User](#)

Code: [GitHub repo](#)

- React application built with, React-Router for client-side routing, Axios to fetch data from GitHub API, use context API to managing state over the application, react-fusioncharts to display user data in charts, add authentication using autho and styled-components for styling.

ECommerce App:

Front-end Code: [GitHub repo](#)

Back-end Code: [GitHub repo](#)

- A full MERN e-commerce application is a robust online shopping platform. It combines MongoDB for data storage, Express for the backend, and React for the frontend. Users can browse product listings, add items to their cart, securely check out, and track their orders. It incorporates user authentication, payment integration, and scalability for efficient growth, providing a seamless and secure shopping experience.

Blood Bank App:

Code: [GitHub repo](#)

- A full MERN blood bank application is a comprehensive solution for managing blood donations and requests. It utilizes MongoDB for data storage, Express for the back end, and React for the frontend. The application enables donors to register, search for blood banks, and schedule appointments. Hospitals can request blood units, and the system matches donors with compatible requests. It includes user authentication, real-time notifications, and secure data management for efficient blood supply coordination.
